About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

In order to secure the long-term success of the company and thus jobs, we want to fulfil our customers' expectations. We place customer satisfaction at the centre of our daily activities and constantly drive forward the continuous improvement process.

As a product of our technical embroidery and using Tailored Fibre Placement TFP technology, we manufacture reinforcement structures that can withstand the highest demands. The components are used, for example, in areas where a lightweight design and high stability are required. These include the automotive sector, aviation, sports equipment and accessories and the medical sector. The demand for our innovative embroidery technology continues to grow thanks to a constant stream of new applications. However, it is not only the weight reduction and stability that speak in favour of using reinforcing structures; depending on the requirements and application, the positive properties such as temperature resistance, corrosion resistance and acid protection are also an important point.

Hermann-Burkhardt-Straße 7 72793 Pfullingen Baden-Württemberg Germany ☑ www.digel-sticktech.de

Organisation type Small or medium-sized enterprise

Employees 10 up to 49

Turnover €2m - €10m

Funding

About this organisation

Main areas covered	Tailored fibre placement (TFP)
Infrastructure	Continuous fibre-reinforced Themoplast
Certifications	ISO 9001; ISO 14001
Keywords	Tailored fibre placement; preform
Memberships	AFBW

Overview of lightweighting expertise
