Chair of General Material Properties WW I

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

The WWI Chair is concerned with the investigation of mechanical properties and microstructure from the nanoscale to the macroscale under a wide variety of differentiated load cases, such as high-temperature deformation, fatigue, creep and wear. The focus is on researching the structure-property correlation.

The Light Metals & Mechanical Testing group at the Chair of WWI focuses on research into aluminium, magnesium and titanium alloys, particularly for structural automotive and aerospace applications. Activities are concentrated on determining the correlation between process parameters, the resulting microstructure and the resulting properties. In combination with research into the dominant damage mechanisms, it is thus possible to specifically influence or improve material/component properties based on mechanisms. Current research topics include wrought and cast aluminium alloys as well as titanium alloys. However, other materials, such as copper alloys or electrical sheets, are also the subject of current work. In all cases, an in-depth understanding of the process-microstructure-property correlation is essential, which is based on extensive material characterisation.

Chair of General Material Properties WW I

About this organisation	
Main areas covered	Alloy development, Mechan. Properties, Microstructure analysis, Damage mechanisms, Structure-property correlation
Infrastructure	
Certifications	
Keywords	
Memberships	

Overview of lightweighting expertise **Machine translation** This organisation has been machine-translated based on data provided in German. Manufacturing Research **Development** & Supply Offer **Products Services & consulting** Validation, Technology transfer, Others (Material selection and quality assurance) Field of technology Design & layout Functional integration Measuring and testing technology Modelling and simulation Plant construction & automation Recycling technologies
