About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

Saarland University was founded in 1948 as a bilingual university under the patronage of France. It is internationally recognised for its computer science research and the nano and life sciences. Its close relations with France and its European focus are its hallmarks: Saarland University has a more international character than almost any other medium-sized German university.

Many of the university's specialisms are closely networked in research and teaching. The academics work closely with universities all over the world as well as with researchers from neighbouring non-university research institutions. All major scientific organisations are represented on the campus and nearby, including two Max Planck Institutes, two Leibniz Institutes and two Fraunhofer Institutes, as well as a Helmholtz Centre and a Helmholtz Institute. The lightweight construction expertise is the result of this cross-section, exemplified by the collaboration between the Materials Science and Engineering department and Systems Engineering, which comprises more than 700 researchers and students.
