About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

As an innovative start-up, LIA GmbH has been active in the field of hybrid lightweight construction technologies across all industries since 2015, from technology consulting and component development to validation. One of the company's core competences lies in the research and development of innovative approaches for the production of load-adapted and therefore material-efficient components.

Since its foundation, LIA GmbH has invested in the development of scientifically sound lightweight construction solutions that show great market potential, but have a high risk in terms of technical feasibility. Many potential customers of hybrid and high-strength metallic structures see the combined use of fibre-reinforced plastics and metallic materials as challenging, as there are no corresponding validation procedures for real-life applications or not enough of them are available for metallic materials. In addition, a lack of knowledge regarding the probability of failure and long-term stability of lightweight structures is an uncertainty and therefore a considerable technical risk. In order to further develop and validate these promising approaches economically into key technologies, the expansion of a corresponding test environment in the service segment was successfully implemented in 2019.

Hohenloher Weg 16 33102 Paderborn North Rhine-Westphalia Germany

About this org	ganisation
Main areas covered	Consulting, Engineering, Production, Testing
Infrastructure	Fatigue strength test, Metallography, Internal calibration laboratory, Steering gear test benches, CAD / Simulation (FEM)
Certifications	DIN EN ISO/IEC 17025:2018
Keywords	Lightweight construction, Hybrid systems, hybrid materials, Testing, Engineering, prototyping, Consulting, e-mobility
Memberships	FAST Automotive Group BV
