

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

BENTELER Automotive is the development partner for the world's leading car manufacturers. With around 23,000 employees and more than 70 plants in around 25 countries, we develop customised solutions for our customers: Our products include components and modules for chassis, body, engine and exhaust systems as well as solutions for electric vehicles.

Megatrends such as sustainability and urbanisation are changing mobility behaviour and the demands placed on it. The requirements for the materials used are also becoming ever more extensive. They need to be sustainable, safe and affordable at the same time. We can do that. Because we know the material we have been working with for almost 150 years. But we are not satisfied with our knowledge - in our materials laboratory in Paderborn, we are constantly investigating the properties and production possibilities of metal, developing new high-strength steels ourselves and analysing possible applications for aluminium. This enables us to offer you the optimum material with perfectly harmonised material properties.
