Additive Marking GmbH

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

Without any additional effort for our customers, our software suite enables an easy entry into paperless production and thus the production of the future. Components are serialised quickly and easily and labelled directly in additive, 3D printing or CNC manufacturing processes, and production is documented seamlessly. We offer our and your customers numerous added values throughout the entire product life cycle.

Labelling and product traceability enable safe and robust processes in lightweight construction and additive manufacturing. Our software supports the development of continuous improvement processes and end-to-end process documentation by incorporating component-specific and unique labelling into the end products.

Technologiepark 31
33100 Paderborn
North Rhine-Westphalia
Germany
