Deutsche Edelstahlwerke is one of the world's leading manufacturers of stainless steel long products with over 160 years of experience. The globally unique product range includes tool steels, stainless, acid and heat-resistant steels (RSH steels), engineering steels and special materials. The range of dimensions extends from drawn wire with a diameter of 4.5 mm to forged products with a diameter of 1,100 mm and metal powder.

Bainidur steels allow a large process window in terms of temperature control during forging and cooling. The bainitic microstructure and the properties of the component can thus be reliably adjusted without additional CO2-emitting heat treatment. Bainidur is the ideal solution for highly stressed parts and at the same time significantly reduces the amount of material used compared to conventional steels, with comparable load values. Bainidur is also suitable for additive manufacturing, covering the entire product life cycle - from additive manufacturing to series production. Density-reduced steels are also part of the DEW portfolio. Aludur steels are high-aluminium alloyed engineering steels. Compared to conventional steels such as 42CrMo4, the high aluminium content in Aludur enables a reduction in specific weight. When used in cars, CO2 emissions can be reduced thanks to the weight saving.

Auestraße 4 58452 Witten North Rhine-Westphalia Germany

About this organisation			
Main areas covered	High-strength steels, density-reduced steels, Metal powder		
Infrastructure	Steel production and processing, Prototyping, Additive manufacturing		
Certifications	ISO 9001, IATF 16949, AS 9100, KTA 1401, ISO 50001 and ISO 14001		
Keywords	Steel, Metal powder, Bainidur, Aludur, Printdur		
Memberships	Lightweight construction initiative, FOSTA
