About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

We are a manufacturer and complete solution provider of measuring and testing systems for general applications in the mechanical and mechatronic fields. We develop measuring devices, software solutions and test benches to evaluate prototypes, optimise products and monitor processes. We focus on physical measurement variables (e.g. strain gauges, vibrations, temperature), fieldbus connections and telemetry systems.

As part of the development of lightweight components, comprehensive evaluations of mechanical concepts and systems using systematic measurement campaigns are required. These must include a wide range of mechanical variables and also include and correlate process and condition variables of the context (e.g. test bench or real application area) in order to enable comprehensive knowledge to be gained. Furthermore, telemetric measurement technology solutions are required in this environment (especially for moving or rotating systems). imc can offer both hardware and software solutions with comprehensive "multi-domain" approaches in order to optimally support users, researchers and developers in their goal of developing innovative and high-performance products.

Voltastr. 5

Organisation type Large enterprises Sectors

Employees

250 up to 499

Turnover More than €50m

Funding

13355 Berlin Berlin Germany ☑ www.imc-tm.de

About this organisation			
Main areas covered	Physical measurement technology, Telemetry systems, Measuring system test benches, Test automation, Measurement and data analysis software		
Infrastructure			
Certifications	ISO 9001, DIN / EN / ISO / IEC 17025		
Keywords	Physical measurement technology, Data acquisition, Data analysis, Telemetr DMS		
Memberships			

Overview of lightweighting expertise **Machine translation** This organisation has been machine-translated based on data provided in German. Manufacturing Research Development & Supply Offer **Products** Software & databases, Others Services & consulting Field of technology Design & layout Functional integration Measuring and testing technology Component and part analysis, Environmental simulation Modelling and simulation Plant construction & automation Recycling technologies
