

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

We are a sustainability consultancy that has been supporting large and medium-sized companies in various sectors since 2007 with expertise, tools and ideas for the successful implementation of sustainability in the three areas of sustainability management, life cycle assessment & environmental management and communication & innovation.

We support lightweight construction with our sustainability assessment methods. With our current project SuLiCo, we are developing a software prototype that aims to guide the development process of lightweight products in terms of holistic performance optimisation. To this end, a software solution is to be developed for the holistic evaluation and comparison of the environmental and resource performance of lightweight plastic products. This software is to be used as early as the design and construction phase of such products and provide users with a multi-criteria decision-making aid.

Hollerallee 14 A
28209 Bremen
