H+P Ingenieure is an efficient civil engineering company that offers high-quality solutions in structural analysis for all areas of building construction and civil engineering. We are a reliable partner for structural analysis, structural design, expert opinions and support for approval procedures and offer our clients customised, technically sophisticated and economical services.

From solid construction, metal construction, timber construction, glass and lightweight construction to innovative composite construction methods, we offer in-depth expertise that is also valued in the development of relevant standards and guidelines. Our team includes five test engineers in all construction methods as well as three recognised EBA test experts for railway bridges. As structural testing engineers, we consistently take advantage of the opportunities offered by digitalisation and are increasingly focusing on digital testing. When it comes to sustainability, we demonstrate our creative power: in the areas of wind energy, photovoltaics and biogas, for example, we are sought-after experts for the supporting structure of plants and have a high level of expertise in circular construction, timber construction and infrastructure.
